Epson Stylus **Photo R3000**

The Epson Stylus Photo R3000 helps professionals and advanced amateurs alike achieve outstanding A3+ prints.
In response to photographers' feedback, Epson has designed the R3000's new features with convenience in mind. A front-loading fine art paper feed makes insertion easy, reducing the likelihood of damage and removing the need for space behind the printer. Viewing media instructions and checking ink levels is simple with the 6.3cm (2.5-inch) colour LCD. And the high-capacity, 25.9ml ink cartridges allow medium print runs to be completed while optimising cost per page – great for clubs sharing a printer or photographers who experience peaks in productivity.

Epson's reputation for superior photo quality combined with the advanced UltraChrome K3 with Vivid Magenta inkset means each print is consistently true-to-life. This inkset offers unbeatable greyscale reproduction, thanks to its three densities of black. Either a standard photo or matte black is employed – and switched automatically by the printer depending on the media used – along with light black and light light black to create true black and white images. This creates a smoother tonal range with a natural look, perfect for portraiture.

Additionally Epson is the only brand to offer photographers a choice of grey tones due to three different black ink densities, which can be easily customised and the settings saved in the driver.

The R3000's print driver is incredibly easy to use and allows the photographer complete control over the image, helping them improve productivity, customise media settings and use ICC profiles to get the output right and create professional-quality images that suit their unique style without relying on a lab. Users can then focus on capturing the perfect shot, rather than having to learn print production skills.
